UNIVERSITY

1.0 Introduction

1.1 Overview

This document relates to the background and surrounding information regarding our project - Emotion detection using voice data. It deals with the scope, shortcomings, risks, architecture, etc. of the project and is meant to serve as documentation to the end-user who wishes to understand the project in detail and modify it to achieve better results.

Revision: 280118

1.2 Scope

With the digitalization of almost and everything the previous decade saw the rise of automating houses and offices with the advent of IOT and Industrial IOT.

Being a fairly new industry there is a scope for widespread innovation from scratch.

The modules can be used independently also as separate products.

Development of facial recognition systems, automatic heating, cooling, access control and leakage detection systems.

2.0 Design Constraints, Assumptions and Dependencies

The assumptions made is -The system never experiences WiFi and power failure.

Dependencies - Constant Uninterrupted WiFi,No power failures

Risks-

The following are the risks which can seriously affect the working of the product.

- Hardware Failures
- Pests biting wires
- Power Failures

3.0 Design Description

This section clearly defines the interfaces that exist between two or more modules/classes.

This could be represented diagrammatically for better understanding of the system.

This section explains briefly about the major modules and classes.

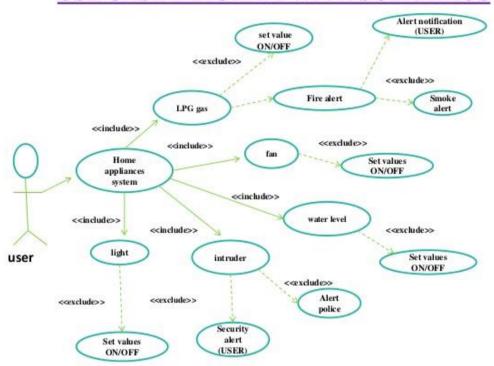

3.1 Master Class Diagram

Use Case Item	Description

Revision: 280118

3.2 Class Diagram

Here, a description of each class in this class diagram will be given. A diagram of the entire system will be given at a high level and then broken down into sub levels. Classes maybe repeated across class diagrams, to show the interfaces with other classes. The detailed explanation of each class with its methods will be covered in the low-level design document.

For Example

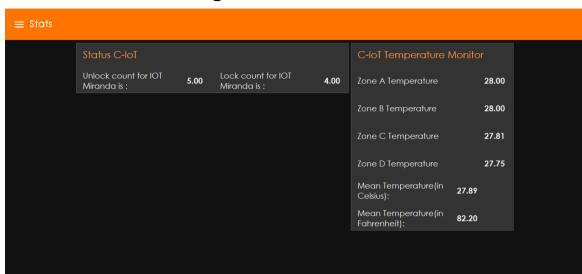

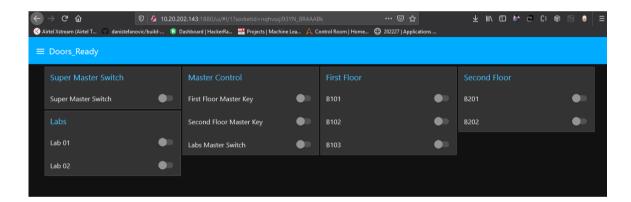

PESU Confidential Page 6 of 8

Revision: 280118

User Interface Diagrams 4.0

Reusability Considerations 5.0

This section shall describe the reusability considerations planned for the project. They may comprise of the following:

- Project Components that are and can be generated with available reusable components
- Components that can be built in the project for reuse in the project

Traceability Matrix 6.0
